                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 6, Application US/08466248

Patent No. 6258359
GENERAL INFORMATION:
APPLICANT: Labigne, Agnes
APPLICANT: Sauerbaum, Sebastien
APPLICANT: Thiberge, Jean-Mitchel
TITLE OF INVENTION: IMMUNOGRAIC COMPOSITIONS AGAINST
TITLE OF INVENTION: COMPOSITIONS, AND NUCLEIC ACID SEQUENCES ENCODING SAID
TITLE OF INVENTION: POLYPEPTIDES
NUMBER OF SEQUENCES: 44
CORRESPONDENCES: 44
ADDRESSONDER ADDRESS:
                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                       ö

Sequence No. 568383

GENERAL INFORMATION:
APPLICANT: Obashi, Tetsuo
APPLICANT: Tanaka, Reiko
TITLE OF INVENTION: Oligonucleotides for Detecting
TITLE OF INVENTION: Salmonella Species and Detection Process Using the Same
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSEE: Birch, Stewart, Kolasch and Birch
STREET: P.O. Box 747
CITY: Falls Church
STATE: VA

| Patent No. 5766570
| GENERAL INFORMATION:
| APPLICANT: Tedder, Thomas F.
| APPLICANT: Zhou, Liang-Ji
| TITLE OF INVENTION: LYMPHOCYTE ACTIVATION ANTIGENS AND
| TITLE OF INVENTION: ANTIBODIES THERETO
| NUMBER OF SEQUENCES: 15
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: Weingarten, Schurgin, Gagnebin & Hayes
| STREET: Ten Post Office Square
| CITY: Boston
         COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/798,691
FILING DATE: 12-Feb-97
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Thomas Gallegos
REGISTRATION NUMBER: 32,692
REGISTRATION NUMBER: 32,692

| Sequence 4, Application US/08974180
| Patent No. 6025194
| GENERAL INFORMATION:
| APPLICANT: Funk, Walter |
| TITLE OF INVENTION: Methods for Modulating and Identifying |
| TITLE OF INVENTION: Callular Senescence |
| TITLE OF INVENTION: Callular Senescence |
| TITLE OF SEQUENCES: 3 6
| CORRESPONDENCE ADDRESS: ADDRESSE: ADDRESSE: Geron Corporation |

Patent No. 6537751

GENERAL INFORMATION:

APPLICANT: Cohen, Daniel

APPLICANT: Chumakov, Ilya

TITLE OF INVENTION: Blallelic markers for use in constructing a high density...

TITLE NETERBNCE: GENSET.020CP1

CURRENT FILING DATE: 1999-104-20

EARLIER FILING DATE: 1999-04-21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TITLE OF INVENTION: CODING SEQUENCE HAPLOTYPE OF THE HUMAN BRCA1 GENE
; Sequence 9, Application US/10174794
; Patent No. 6664086
; GENERAL INFORMATION:
; APPLICANT CONTACTION:
; TITLE OF INVENTION: CDMA, GENOMIC, AND PREDICTED PROTEIN
; TITLE OF INVENTION: SEQUENCES OF LEARNING-INDUCED KINASES;
FILE REFRENCE: 137461-707
; CURRENT APPLICATION NUMBER: US/10/174, 794
; CURRENT FILING DATE: 1909-10-01
; PRIOR APPLICATION NUMBER: US 60/102,906
; PRIOR FILING DATE: 1999-10-02
; NUMBER OF SEQ ID NOS: 16
; SOFTWARE: 1998-10-02
; SOFTWARE: 1998-10-02

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-422-978-8771

US-09-422-978-8771

Sequence 8771.

Patent No. 6537751

GENERAL INFORMATION:

APPLICANT: Cohen, Daniel

APPLICANT: Chumakov, Ilya

TITLE OF INVENTION: Biallelic markers for use in constructing a high density...

FILE REFERENCE: GENER 1099-10-20

CURRENT APPLICATION NUMBER: US/09/422,978

CURRENT APPLICATION NUMBER: US 09/298,850

EARLIER PILING DATE: 1999-04-21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 23, Application US/08432158
Patent No. 5861502
GENERAL INFORMATION:
APPLICANT: Prockop, Darwin J
APPLICANT: Colige, Alain
APPLICANT: Baserga, Renato
APPLICANT: Nugent, Paul
TITLE OF INVENTION: Antisense Oligonucleotides to
TITLE OF INVENTION: Inhibit Expression of Mutated and
TITLE OF INVENTION: Mild Type Genes for Collagen
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                       CAMPUTER FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
COMPUTER: IBM PC Compatible
COMPUTER: IBM PC Compatible
COMPATER: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/29,187
FILING DATE: 31-ANG-1994
CLASSIFICATION:

Sequence 4, Application US/08876874

Patent No. 5942405

GENERAL INFORMATION:

APPLICANT: Robert

APPLICANT: Bergsma, Derk

APPLICANT: Foley, James

APPLICANT: Runar, Chandrika

APPLICANT: Sarau, Henry

TITLE OF INVENTION: THERAPEUTIC AND SCREENING

TITLE OF INVENTION: METHODS USING C3A RECEPTOR AND C3A

NUMBER OF SEQUENCES: 5

CORRESPONDENCE ADDRESS:

ADDRESSE: RATNER & PRESTIA

STREET: P.O. BOX 980

US-09-685-664B-1078/C

Sequence 1078, Application US/0968564B

Patent No. 6818447

GENERAL INFORMATION:

APPLICANT: Rabozyme Pharmaceuticals, Inc.

APPLICANT: Bacobedo, Jaime

APPLICANT: Stinchcomb, Dan

APPLICANT: Scobedo, Jaime

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Recptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Recptor

CURRENT APPLICATION NUMBER: US/09/685,664B

CURRENT PILING DATE: 1995-10-26

PRIOR APPLICATION NUMBER: US 06/005,974

PRIOR APPLICATION NUMBER: US 08/584,040

PRIOR APPLICATION NUMBER: US 09/371,772

PRIOR APPLICATION NUMBER: US 09/371,772

PRIOR PILING DATE: 1999-08-10

NUMBER OF SEQ ID NOS: 8231

SOFTWARE: PatentIn version 3.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 113, Application US/09345882

Sequence 113, Application US/09345882

Sequence 113, Application US/09345882

Setting 113, Application US/09345882

SENERAL INFORMATION:

TITLE OF INVENTION: A NUCLEIC ACID ENCODING A RETINOBLASTOMA BINDING PROTEIN (RBP-7)

TITLE OF INVENTION: AND POLYMORPHIC MARKERS ASSOCIATED WITH SAID NUCLEIC ACID.

TITLE OF INVENTION: AND POLYMORPHIC MARKERS ASSOCIATED WITH SAID NUCLEIC ACID.

PILE REFERENCE: GENSET. 031A

CURRENT APPLICATION NUMBER: US 60/091,315

PRIOR APPLICATION NUMBER: US 60/111,909

PRIOR FILING DATE: 1999-12-10

NUMBER OF SEQ ID NOS: 140

SEQ ID NO 113

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-09-535-012A-16

US-09-535-012A-16

Sequence 16, Application US/09535012A

Patent No. 65312B1

GENERAL INFORMATION:
TITLE OF INVENTION: Method of Detecting Sulphate- Reducing Bacteria

TITLE OF INVENTION: Method of Detecting Sulphate- Reducing Bacteria

CURRENT APPLICATION NUMBER: US/09/535,012A

CURRENT APPLICATION NUMBER: US/09/535,012A

PRIOR APPLICATION NUMBER: 9903637

PRIOR FILING DATE: 1999-03-24

NUMBER OF SEQ ID NOS: 25

SOFTWARE: PatentIn Ver. 2.1

SEQ ID NO 16

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WESULE 233
US-09-155-885A-145/C

# Sequence 145, Application US/09155885A

# Patent No. 6709812

# GENERAL INFORMATION:
# MAERTENS, GEERT

# TITLE OF INVENTION: METHOD FOR TYPING AND DETECTING HBV

# NUMBER OF SEQUENCES: 313

# CORRESPONDENCE ADDRESS:
# ADDRESSEE: NIXON & VANDERHYE P.C.
# STREET: 1100 NORTH GLEBE ROAD

# COUNTRY: U.S.A.
# ZIP: 22201-4714

# COMPUTER READABLE FORM:
# MEDIUM TYPE: Floppy disk

# MEDIUM TYPE: Floppy disk
